VIEWPOWER REPORT PACKAGE RELEASE

March 1, 2003

MIDAS offers a new set of add-on reports for the ViewPower Internet application that enhance its already powerful historical electrical metering information access capabilities.

ViewPower is a served Internet application designed to allow you to view, manipulate and export electrical energy interval metering data for both real (physical) and virtual (aggregated) metering points from multiple geographically-dispersed facilities in a variety of tabular, graphical or report formats.

The new ViewPower reports are designed to provide you with tabular and graphical representation of your energy use and the corresponding pool price as well as some key statistics related to that usage and the pool price over a user-defined period of time. The Load Facility Consumption Report is the sister report to the Generation Facility Summary Report that you have seen already and is particularly useful to the self retail power consumer, though power consumers on the Regulated Rate Option can get a sense of whether their load side billing is reasonable. The Energy and Pool Price Report allows you to see, at a glance, a comparison of energy produced or consumed to the actual hourly pool price and also contains other useful statistics related to energy and pool price. The Pool Price Exploitation Report allows you to set threshold values for pool price and energy levels so that you can see whether you have capitalized or have been missing out on high pool price hours.

“The new ViewPower reports are just the beginning,” says Randy Clarke, VP Operations “Our intent is to evolve our ViewPower application into a product that you won’t want to be without.”
