

MIDAS METERING SERVICES LTD.

METERING INSTALLATION & DATA ACQUISITION SERVICES

DELIVEREDPOWER - INTERNET DATA DELIVERY SERVICE

Background: While the MIDAS ViewPower Internet application service provides clients with powerful tabular, graphical and report-based access to their interval metering data, it was not designed as a data delivery mechanism for clients who require an ongoing and automatic energy data feed for their corporate information systems or management processes. DeliveredPower addresses this unique need.

Description: The DeliveredPower Internet data delivery service provides clients with the on-going daily, weekly or monthly delivery of their real and/or virtual metering point interval energy data via an Internet FTP or EMAIL channel.

Applications: DeliveredPower can be used to address a variety of client applications including, but not limited to:

- automated corporate energy information database feed
- periodic operational verifications processes
- periodic financial settlement verification processes
- third-party agency data feeds
- ...

System

Requirements: The following are the requirements necessary to use the DeliveredPower application:

- access to the Internet via a dedicated or dial-up connection to an Internet Service Provider

Pricing: Please contact us directly for up-to-date subscription pricing as well as detailed terms and condition of service.
