

MIDAS METERING SERVICES LTD.

METERING INSTALLATION & DATA ACQUISITION SERVICES

METERING DATA MANAGEMENT SERVICES

Description: Metering Data Management Services are designed for clients who want their interval energy metering data to be collected, validated, processed and stored. This basic service is typically required by clients who need their interval energy data:

1. made available to themselves or their agents via the Internet (ViewPower service), and/or
2. delivered to themselves or their agents via the Internet (DeliveredPower service)

Purpose: The purpose of the Metering Data Management services is to relieve the client from having to deal with the day-to-day operational management of their metering data and simply provide them with worry-free access to that data so that they can focus directly on getting value from the information and knowledge that the data itself can provide.

Application: Metering Data Management Services are required to collect, validate, process (aggregate) and store 15 minute interval metering data from:

- electrical revenue metering systems
- electrical metering transducers
- electrical energy pulse recorders

so that it can be stored, transferred or otherwise made available for the client's use. Access to this data can be used for:

- utility check metering
- multiple facility aggregation
- load profile verification
- consumption planning
- ...

Services: The following services are provided:

- daily data collection, validation and processing operations, and
- secure on-line and off-line storage of the fifteen (15) minute interval active and reactive energy data, and
- reporting of energy metering data anomalies that may indicate potential metering system or communications problems, and

Pricing: Metering Data Management Services are available on a real meter point volume discounted basis. Please contact us directly for current and specific configuration pricing details.
