

MIDAS METERING SERVICES LTD.

METERING INSTALLATION & DATA ACQUISITION SERVICES

CONSULTING SERVICES

MIDAS personnel are highly trained, highly skilled individuals with over 50 years of combined experience in electrical metering, data management and information systems design and development. Whether you need help verifying your measured billing determinants, allocating energy costs, analyzing load profiles or designing your own in-house energy management system, MIDAS can provide the expertise to help you staff achieve your corporate or project goals.

General Consulting Services

Electrical metering and the associated data management and information systems are very specialized areas of expertise that have traditionally been the domain of the electrical utilities. The de-regulation of the electrical energy industry is reshaping and redistributing that domain and MIDAS provides expertise to clients whose businesses are affected by these industry changes.

Power Measurement Ltd. System Integration Services

Power Measurement Ltd. (PML) is an industry leader in the manufacture and development of high-end electrical energy metering hardware and software. MIDAS provides clients with system design, integration and interface expertise to help them get the most out of their investment in these powerful, state-of-the-art systems.

Itron MV-90 System Integration Services

MV-90, a software product marketed by Itron, is the utility industry standard software for remote interval metering data management. MIDAS uses MV-90 as one part of their own in-house data management system and so can provide clients with extensive MV-90 installation and operations expertise.

Load Profile Measurement & Analysis Services

Hourly-based energy billing for electrical services that are metered using continuously cumulative energy/demand meters is typically managed through the use of standardized static or dynamic profiles that may or may not be indicative of the true consumption pattern of the service to which they are applied. MIDAS can provide measurement and analysis services to assess the potential value of upgrading to an interval-based metering system.
